

HIV Children

The HIV children here at Dorcas have greatly improved with their nutrition over time because of the great role the Shared Blessings ICM team is playing in their lives, most of these children are orphan and some staying with their parents who are also sickly and can hardly provide for their families.

Through the nutrition program we have at Dorcas, their lives have been improved compared to the past.

When we made out reaches to these children's homes in this month of April 2015, we found that they had some common challenges; No proper bedding, barely have clothing and a challenge of health care services.

If there be a way we pray that the lives of these children be further improved.

God bless the hands that have given and those who struggle to endeavor that these children's lives are improved and that they can have a better future.
